Project Report

This set of five projects helped me build practical digital literacy, communication, coding, collaboration, and cyber safety skills that are highly relevant for academic and professional growth. In the first task, I designed a Digital Literacy Awareness Infographic using Canva and PowerPoint, where I learned how layout, colour balance, icons, and spacing improve clarity and visual communication.

In the second task, I built a student digital portfolio by creating profiles on LinkedIn, GitHub, and Kaggle, which will help me showcase my skills, projects, and achievements over the next few years.

In the third task, I explored coding and collaboration platforms by creating a HackerRank account, completing beginner challenges, and earning a badge. I also created a Digital Literacy Awareness Quiz using Google Forms and recorded responses in Google Sheets, which taught me how digital tools can support data collection and awareness activities.

In the fourth task, I drafted two professional emails and prepared a social media dos and don’ts checklist, which improved my understanding of email etiquette, formal communication, and responsible online behaviour.

In the fifth task, I created a case study on phishing and a Stay Safe Online Checklist for college students in India. This helped me understand how cyber fraud happens and how simple preventive habits—such as verifying links, using strong passwords, and staying alert during UPI transactions—can reduce online risks.

Overall, these five tasks improved my technical skills, digital awareness, communication ability, and online professionalism. They will help me academically in assignments, coding practice, presentations, research, internships, and building a strong digital identity.
