Project Report 1

Create a Digital Literacy Awareness Infographic

I created the infographic using Canva and PowerPoint and used different effects and designs, I added different colours of dialogue boxes to make the design easier to read, attractive and appealing to the eye. The design focuses on the topic **"Digital Literacy & Skills"** and presents important ideas in a clear, colourful, and friendly way using layman language.

The final visual includes four main sections: What is Digital Literacy, Safe Internet Practices, Professional Online Presence, and Email Etiquettes. Each section uses different colours, icons, and headings to make the information easy to understand at a glance. I also added a central laptop illustration and a bottom banner saying "Stay Smart & Safe Online!" to make the design more attractive and visually balanced and to make understand the general idea of the design.

One thing I found interesting while making this project was how layout and spacing can change the overall look of a slide. At first, there was some blank space after removing one section, so I improved the "What is Digital Literacy?" part by adding more points and making the design more balanced. The slightly difficult part was making sure the infographic looked informative but not overcrowded and the balance of colours and professionalism. Overall, it was a creative and useful learning experience.
