PROJECT REPORT 3

Explore Coding & Collaboration Platforms

Part A: Coding Practice

For Part A, I used the HackerRank platform, which is a popular online coding and skill-development website. I created my account on HackerRank and explored its beginner-level programming challenges. The platform provides coding problems in different languages and difficulty levels, making it a useful place to practise problem-solving and programming logic. In this project, I completed the beginner-level challenges and successfully secured a badge, which shows my progress and achievement on the platform. Through this activity, I practised writing simple programs, understanding coding syntax, debugging errors, and improving my logical thinking. HackerRank also helped me learn how to solve problems within a proper coding environment, similar to what is used in technical tests and placements. Academically, this platform is very useful because it strengthens my programming basics, improves my confidence in coding, and prepares me for lab work, coding assignments, competitive programming, and future placement preparation.

Part B: Google Workspace Collaboration

For Part B, I used Google Forms and Google Sheets. I created a Digital Literacy Awareness Quiz in Google Forms containing 5 multiple-choice questions based on topics such as online safety, strong passwords, cyberbullying, suspicious emails, and verifying information before sharing it online. After creating the quiz, I shared it and recorded the responses automatically in Google Sheets. This project helped me understand how digital tools can be used for awareness, data collection, and academic activities. I practised designing online forms, adding multiple-choice questions, setting up response collection, and organizing the data in a spreadsheet. These tools are academically helpful because they can be used for creating surveys, quizzes, feedback forms, attendance forms, and collecting research data in an easy and organized manner. This project also improved my digital literacy and showed me how technology can be used not only for learning but also for managing and analyzing information effectively.
